DESCRIPTION

The ProTran1 ProTracker Train Device (TD) is designed to be mounted in the cab of a train. The train operator will be audibly and visually alerted of personnel near the train tracks who are wearing the ProTracker Personal Alert Device (PAD) and Safety Yellow Blue-Tooth. These devices are meant to be a secondary warning to existing procedures. Never to be used as primary safety just as an additional back-up. Unit is never to replace a flagger or existing procedures.

The ProTracker Personal Alert Device (PAD) and the Portable Warning Lights/Horn (PWLH) communicate with the Train Device (TD). Once a train is detected both the PAD and PWLH will turn on giving warning to the work crew of an approaching train. It will also warn the train operator of the work crew up ahead. Also Ideal for advance warning for first responders and fire, chemical or biological releases.
